

# GLOBAL WOPs COMMUNITY OF PRACTITIONERS

Inclusive Expert Communities of Practice (CoPs) connect water and sanitation practitioners and promoters of peer learning. They form the backbone of capacity building, create effective and efficient work processes, and co-create innovative approaches across WOP projects through thematic expert CoPs. Water Operator Partnerships generate unique experiences, success stories, best practices, and valuable insights that are worth sharing/replication with the expert CoPs via webinars, masterclasses, regional training workshops, or peer-to-peer chats and posts.

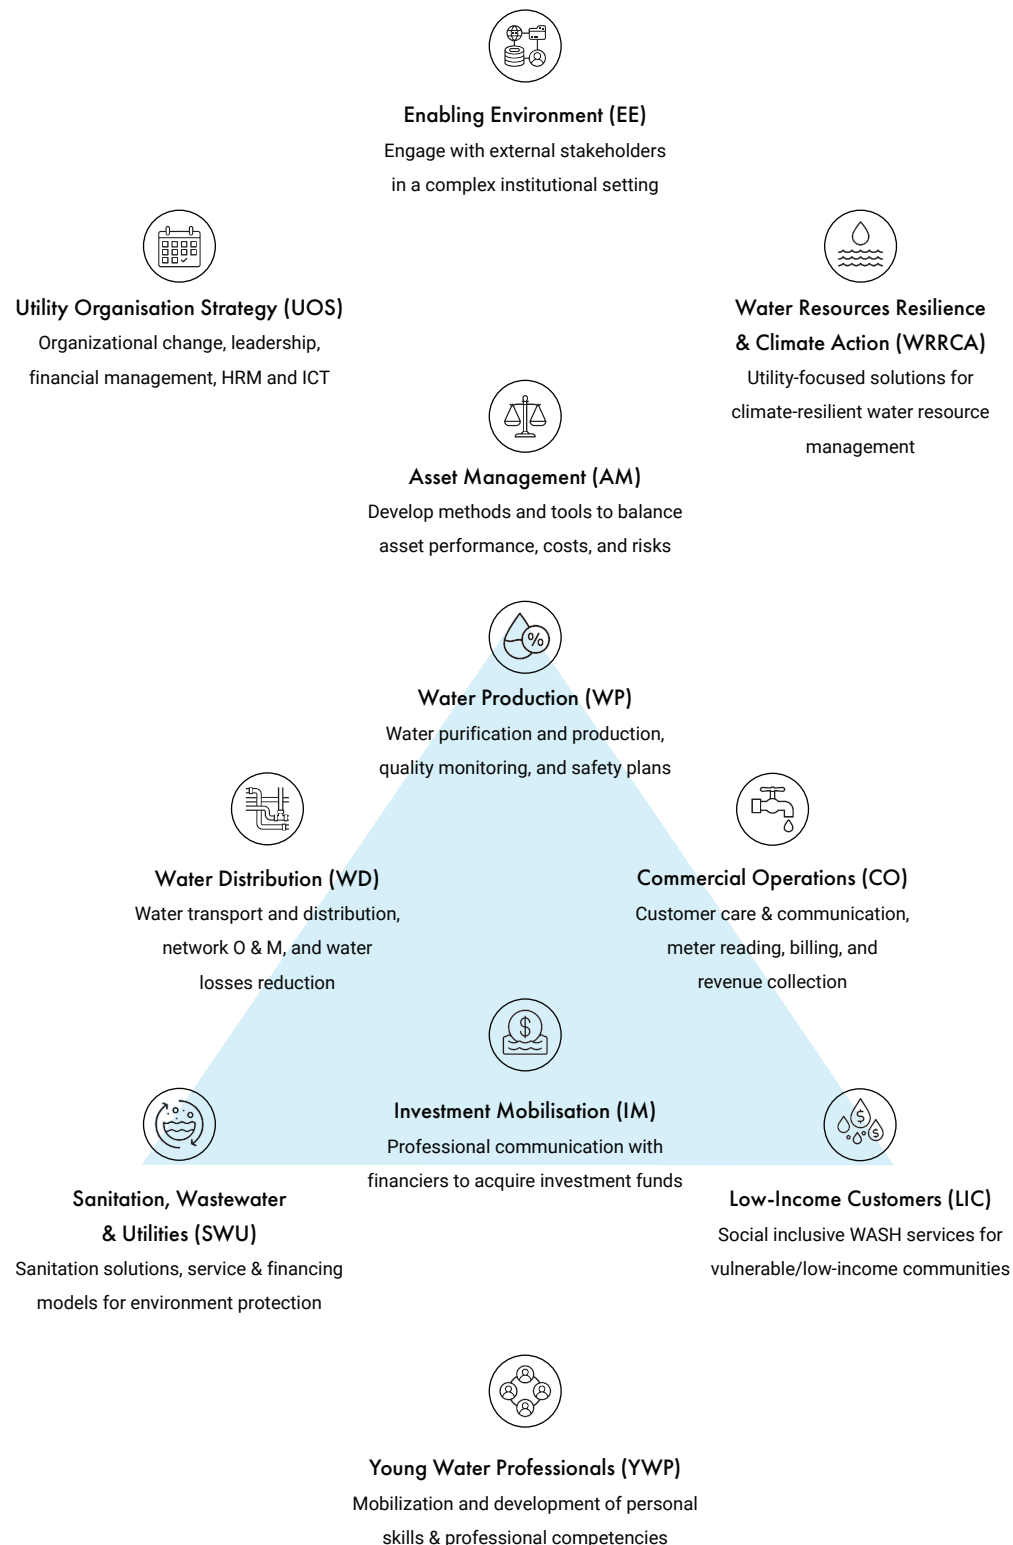

The CoPs are breeding sites to empower peer practitioners, personally and professionally. The ultimate goal is to improve upon the operational work processes of water operators and so enhance their overall performance. This may, with time to come, accelerate their potential to contribute to the UN SDG 6 Goals and raise opportunities for investment financing.

Established through UN-Habitat/Global Water Operators' Partnerships Alliance (GWOPA) and the WaterworX WOP program, the Global WOPs Community currently hosts over 800 members spread over 10 expert CoPs in one online platform (Workplace) where water and sanitation practitioners can meet, chat, exchange, and learn from each other.

Active participation of water and sanitation practitioners in the expert CoPs will add on to their personal and professional development, strengthen the organizational capacity of water operators, and pave the road towards extended and/or improved service delivery (the UN SDG6 targets).
